

mega macs 77 – the Diagnostic Tool with a Smart Concept Available in Two Versions

- **mega macs 77 gets off to a flying new start with a smart diagnostic interface**
- **Choice between standard and Vario version**
- **Possibility to upgrade to the full or combined version with bike diagnostics**

Ihringen, September 2019. The technological advances in vehicles have an important impact on service and repair processes. This is why the high-end diagnostic device mega macs 77 from Hella Gutmann is now taking a big step towards the future.

With the next update to software version 57, the mega macs 77 will receive much more than a usual software upgrade consisting of new vehicle models and systems. Equipped with new thought patterns and even a new face, the device evolves into a smart diagnostic interface (SDI).

The smart operating concept opens up a whole new world for users which is comparable to switching smartphones from different generations. Nevertheless, long-time users will quickly find their way around since the software architecture is the same as in current smartphones. At every stage of the vehicle diagnosis, the user has everything he needs on the display. An innovative search function for components provides additional information. Always in view is the side bar menu which can be customized to individual requirements. It is the key to fast access from every step in the diagnostic procedure – a new feature similar to the shortcut apps on mobile phones. This practical new feature and other innovations shorten the time for diagnosis even further.

For the first time, Hella Gutmann is offering the diagnostic tool mega macs 77 in the trimmed-down Vario version. This is an interesting alternative for workshops wanting to work with a high-end tool but who do not wish to use all the functions

offered by the standard version of the mega macs 77. With guided measurements, Pin data, interactive wiring diagrams and interlinking, the latter remains in a class of its own.

For all mega macs 77 devices with software version 56, the software version 57 and the automatic transition to SDI is free of charge. New users or users who switch from another diagnostic device will already receive the mega macs 77 and the mega macs 77 Vario with the advanced SDI user concept by the end of the year.
